

ABSTRACT OF THE DISCLOSURE

An inputted voice is recorded as a main voice into  
a recording medium, a voice associated with the main  
voice recorded into the recording medium is inputted,  
5 and then, the voice is recorded as additional voice  
information into the recording medium to be associated  
with the main voice. After a file number indicating  
the main voice recorded into the recording medium has  
been selected, the additional voice information  
10 associated with the main voice is reproduced. The  
contents of the main voice can be checked by the  
reproduced additional voice.
